INSTITUTIONS

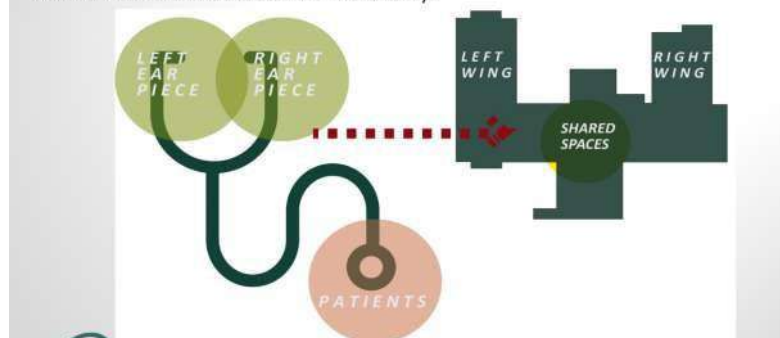

CONCEPTUALIZATION

Just as the stethoscope listens to internal sounds of the human body, the hospital will symbolically pay keen attention to the needs of its community and cater for its health needs sufficiently.

CONCEPTUALIZATION - PLANNING

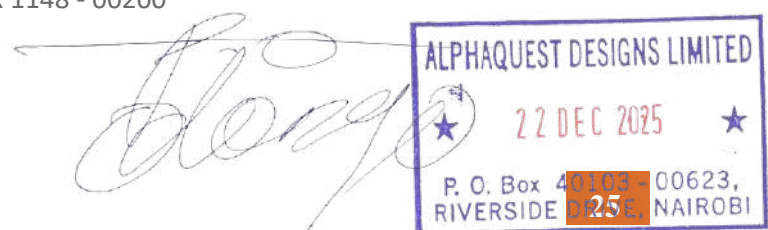

The stethoscope has been abstracted and used in the spatial planning of spaces on the master plan. The 2 earpieces symbolize the two wing of the hospital while the diaphragm tubing is an axis which links the patients to the hospital. At the tip of the axis (code), are shared amenities such as reception, washrooms and circulation for the facility.

Project Description

The project focused on providing maximum possible outdoor space to the residents, while creating the maximum visual privacy from outside to inside.

The initial idea was to create a flexible and variable building façade.

The intention was to reach the desired resulted by changing the openings while giving the residents the right to choose their level of privacy.

The building houses serviced one and two bedroom units with a gym, spa, and a private entertainment terrace for the residents.
